

## Mycological Notes 25: The status of names of powdery mildews in New Zealand.

Jerry Cooper, August 2013

Compiling Mycological Notes 24 on two unusual powdery mildews (PMs) highlighted a significant issue of which I have long been aware and which contributed to me erroneously reporting *Erysiphe platani* as a 'New Organism' when the PM on Plane trees had already been recorded under the misapplied name *Erysiphe alphitoides*. The status of names applied to PMs in New Zealand is currently inadequate due to the absence of a modern New Zealand revision of the group. The names applied to many early collections are misleading when considered in the context of the current global knowledge of the group, and from that evidence it is nearly impossible to say which species are present in New Zealand and which are not. PMs are important plant pathogens and it is important that we know what we have, and what we don't. For example *Blumeria graminis* is considered one of the world's top ten fungal pathogens (Dean et al, 2012) affecting a wide variety of cereal crops. This is one of the few PMs about which there has been consistent agreement on the correct name, although even in this case the name is actually used in a broad sense for many narrowly host-specific races.

During the 1970s and 1980's H.J Boesewinkel contributed significantly to the New Zealand knowledge of PMs, and indeed made significant contributions to the knowledge of the group at the global level (e.g. Boesewinkel, 1976, 1977, 1980). In addition K.R.W. Hammett surveyed the erysiphaceae of New Zealand in 1977.

Earlier in the 20<sup>th</sup> century it was common to use a very broad species concept for names such as *Erysiphe cichoracearum* and *Erysiphe polygoni*. It was assumed that these names applied to PMs capable of infecting many species of host plant, and the national collection, [PDD](#), still has many collections identified during this period using these old species concepts. In PDD the name *E. cichoracearum* is currently used for the PM affecting 55 genera of plant hosts, and *E. polygoni* affecting 35 genera of plant hosts. The modern species concept are very different with *E. cichoracearum* (now known as *Golovinomyces cichoracearum*) probably correctly applied to just two genera of New Zealand plants, and *E. polygoni* not present in New Zealand at all.

During the 60s and 70s it was realised that many PMs (but not all) are really quite host specific. Detailed morphological studies combined with experiments to determine the host range using deliberate infections led to the recognition of many new species concepts. Some of the collections in PDD identified during this period reflect these altered species concepts.

Since the 1990s the work of Braun (and Cook) and others, together with the application of molecular analysis has revolutionised our understanding of the taxonomy of PMs and their host affinities. Once again the species concepts and the applied names have been shuffled but the collections in PDD have not been revised in the light of this work. The present, relatively stable state of knowledge of the group is summarised by Braun and Cook (2012) and somehow we need to apply this knowledge to the New Zealand situation.

In this analysis I have not looked at any collections in PDD, and it probably wouldn't help very much. Most of our PMs are recorded only as the anamorphic state and it is very difficult to determine species from the morphology of the anamorphic state alone (Boesewinkel, 1976). Only 11% are known to have the morphologically informative teleomorph state present in New Zealand. I have looked at the hosts of the historical records in PDD and I have used this host list in conjunction with Braun & Cook 2012 to arrive at a list of potential PMs for each host. I have then used information on the global distribution of these taxa and hosts, together with the historical New Zealand names, to arrive at a most likely candidate for the identity of the PMs for this host in New Zealand. In some cases I identify

two possibilities, and when there are more possibilities I have given up. These entries have a question mark against them, and the identity of these PMs definitely needs investigation. The PMs associated with some hosts remain taxonomically uncertain (according to the global state of knowledge), and once again these PMs require further investigation. Interestingly, a number of these poorly known taxa are PMs on endemic plant hosts, and some of those hosts are threatened according the latest data from the Department of Conservation.

Table 1 is derived from data in PDD. I have listed the host species against the identified PM. This list reflects the current stated knowledge of the group according to the unrevised identifications currently applied to specimens in PDD.

**Table 1: PDD specimens of powdery mildews showing the recorded fungus and host names**

Existing PDD host/PM data	
Recorded Host	Recorded PM
Acaena	Sphaerotheca aphanis
Acanthus mollis	Phyllactinia guttata
Acer negundo	Oidium
Acer negundo	Sawadaea bicornis
Acer negundo	Uncinula bicornis
Acer pseudoplatanus	Uncinula bicornis
Achillea millefolium	Erysiphe cichoracearum
Ailanthus altissima	Microsphaera alphitoides
Ajuga reptans	Golovinomyces biocellatus
Alectryon excelsus	Oidium
Alectryon grandis	Sawadaea bicornis
Alseuosmia quercifolia	Erysiphe cichoracearum
Alseuosmia quercifolia	Microsphaera euonymi-japonici
Anethum graveolens	Erysiphe heraclei
Anthemis tinctoria	Oidium
Aquilegia vulgaris	Erysiphe aquilegiae var. aquilegiae
Aquilegia vulgaris	Erysiphe polygoni
Aquilegia vulgaris	Erysiphe ranunculi
Aquilegia vulgaris	Oidium
Araujia sericifera	Oidium
Arctium lappa	Erysiphe
Aristolochia	Erysiphe densa
Aristolochia fruticosa	Erysiphe polygoni
Aristolochia racemosa	Erysiphe densa
Aristolochia serrata	Erysiphe densa
Aristolochia serrata	Erysiphe polygoni
Aster	Erysiphe cichoracearum
Aster ericoides	Erysiphe cichoracearum
Aster subulatus	Erysiphe cichoracearum
Begonia	Erysiphe cichoracearum
Begonia coccinea	Erysiphe
Begonia coccinea	Microsphaera begoniae
Begonia masoniana	Erysiphe cichoracearum
Begonia masoniana	Microsphaera begoniae
Begonia rex	Microsphaera begoniae
Begonia rex-cultorum	Erysiphe cichoracearum
Begonia semperflorens	Erysiphe cichoracearum
Begonia semperflorens	Oidium
Begonia tuberhybrida	Erysiphe cichoracearum
Beta vulgaris	Erysiphe betae
Beta vulgaris	Oidium
Borago officinalis	Erysiphe cichoracearum
Borago officinalis	Oidium
Brachyglottis repanda	Erysiphe cichoracearum
Brassica	Erysiphe pisi
Brassica	Erysiphe polygoni
Brassica campestris	Oidium
Brassica juncea var. crispifolia	Erysiphe cruciferarum
Brassica napo-brassica	Erysiphe polygoni
Brassica napus var. napo-brassica	Erysiphe polygoni
Brassica oleracea var. capitata	Erysiphe cruciferarum
Brassica oleracea var. ramosa	Erysiphe polygoni
Brassica rapa	Erysiphe polygoni
Bromus mollis	Blumeria graminis
Bupthalmum speciosum	Erysiphe cichoracearum
Calendula officinalis	Oidium
Calendula officinalis	Sphaerotheca fuliginea
Capsicum annuum	Leveillula taurica
Cardamine	Oidium
Cardamine debilis	Erysiphe cichoracearum
Cardamine flexuosa	Erysiphe cichoracearum
Cardamine hirsuta	Erysiphe cichoracearum
Cardamine hirsuta	Erysiphe mougeotii
Carica xheilbornii	Erysiphe cichoracearum
Carica microcarpa	Sphaerotheca fuliginea
Carica papaya	Erysiphe cichoracearum
Carica papaya	Oidium caricae
Carica papaya	Sphaerotheca fuliginea
Carica pubescens	Erysiphe cichoracearum
Carica pubescens	Oidium caricae
Carica pubescens	Sphaerotheca fuliginea
Carica pubescens × stipulata	Oidium caricae
Carica pubescens × stipulata	Sphaerotheca fuliginea
Castanea	Microsphaera penicillata
Castanea crenata	Microsphaera alphitoides
Castanea sativa	Microsphaera

<i>Castanea sativa</i>	<i>Microsphaera alphitoides</i>
<i>Castanea sativa</i>	<i>Oidium</i>
<i>Ceropegia haygarthii</i>	<i>Oidium</i>
<i>Chrysanthemum indicum</i>	<i>Erysiphe</i>
<i>Chrysanthemum indicum</i>	<i>Oidium chrysanthemi</i>
<i>Chrysanthemum morifolium</i>	<i>Oidium chrysanthemi</i>
<i>Cirsium arvense</i>	<i>Golovinomyces cichoracearum</i>
<i>Citrullus lanatus</i>	<i>Sphaerotheca fuliginea</i>
<i>Clematis</i>	<i>Erysiphe polygoni</i>
<i>Clematis australis</i> var. <i>rutaefolia</i>	<i>Erysiphe polygoni</i>
<i>Clematis forsteri</i>	<i>Erysiphe aquilegiae</i> var. <i>ranunculi</i>
<i>Clematis jackmanni</i>	<i>Erysiphe polygoni</i>
<i>Clematis paniculata</i>	<i>Erysiphe aquilegiae</i>
<i>Clematis paniculata</i>	<i>Erysiphe ranunculi</i>
<i>Clematis recta</i>	<i>Erysiphe polygoni</i>
<i>Clematis stans</i>	<i>Erysiphe polygoni</i>
<i>Clematis vitalba</i>	<i>Erysiphe aquilegiae</i> var. <i>ranunculi</i>
<i>Cleome</i>	<i>Erysiphe pisi</i>
<i>Cleome hassleriana</i>	<i>Erysiphe cichoracearum</i>
<i>Cleome hassleriana</i>	<i>Oidium</i>
<i>Clianthus puniceus</i>	<i>Oidium</i>
<i>Coriaria angustissima</i>	<i>Sphaerotheca fuliginea</i>
<i>Coriaria arborea</i>	<i>Sphaerotheca fuliginea</i>
<i>Coriaria lirida</i>	<i>Sphaerotheca fuliginea</i>

<i>Taraxacum officinale</i>	Erysiphe cichoracearum
<i>Thunbergia gibsonia</i>	Sphaerotheca fuliginea
<i>Thunbergia gregorii</i>	Sphaerotheca fuliginea
<i>Thymus</i>	Oidium
<i>Thymus serpyllum</i>	Erysiphe cichoracearum
<i>Thymus serpyllum</i>	Oidium
<i>Tragopogon porrifolius</i>	Oidium
<i>Trifolium dubium</i>	Erysiphe
<i>Trifolium dubium</i>	Erysiphe polygoni
<i>Trifolium dubium</i>	Erysiphe trifolii
<i>Trifolium dubium</i>	Oidium
<i>Trifolium micranthum</i>	Erysiphe polygoni
<i>Trifolium micranthum</i>	Oidium
<i>Trifolium striatum</i>	Oidium
<i>Trifolium subterraneum</i>	Erysiphe polygoni
<i>Triticum</i>	Erysiphe graminis
<i>Triticum aestivum</i>	Erysiphe graminis
<i>Triticum vulgare</i>	Erysiphe graminis
<i>Urtica australis</i>	Oidium
<i>Urtica dioica</i>	Erysiphe cichoracearum
<i>Urtica ferox</i>	Erysiphe cichoracearum
<i>Urtica ferox</i>	Sphaerotheca alchemillae
<i>Urtica incisa</i>	Oidium
<i>Urtica incisa</i>	Sphaerotheca alchemillae

<i>Valerianella locusta</i>	Erysiphe cichoracearum
<i>Valerianella locusta</i>	Oidium
<i>Verbascum</i>	Erysiphe cichoracearum
<i>Verbascum thapsus</i>	Erysiphe cichoracearum
<i>Verbascum thapsus</i>	Erysiphe verbasci
<i>Verbascum thapsus</i>	Golovinomyces cichoracearum
<i>Verbascum virgatum</i>	Erysiphe cichoracearum
<i>Verbascum virgatum</i>	Golovinomyces verbasci
<i>Verbena</i>	Oidium
<i>Verbena</i>	Sphaerotheca fuliginea
<i>Verbena bonariensis</i>	Sphaerotheca fuliginea
<i>Verbena hybrida</i>	Oidium
<i>Verbena hybrida</i>	Sphaerotheca fuliginea
<i>Veronica</i>	Oidium
<i>Veronica arvensis</i>	Erysiphe cichoracearum
<i>Veronica arvensis</i>	Oidium
<i>Veronica persica</i>	Erysiphe cichoracearum
<i>Veronica persica</i>	Oidium
<i>Viburnum japonicum</i>	Microsphaera sparsa
<i>Viburnum opulus</i>	Microsphaera viburni
<i>Viburnum trilobium</i>	Microsphaera viburni
<i>Vigna cariacolla</i>	Sphaerotheca fuliginea
<i>Vigna mungo</i>	Sphaerotheca fuliginea
<i>Viola</i>	Erysiphe cichoracearum
<i>Viola</i>	Sphaerotheca alchemillae
<i>Viola xwittrockiana</i>	Erysiphe cichoracearum
<i>Viola tricolor</i>	Erysiphe cichoracearum
<i>Viola tricolor</i>	Sphaerotheca alchemillae
<i>Viola tricolor</i> var. <i>hortensis</i>	Oidium
<i>Vitex lucens</i>	Phyllactinia guttata
<i>Vitis vinifera</i>	Uncinula necator
<i>Wasabia japonica</i>	Erysiphe polygoni
<i>Weinmannia</i>	Erysiphe polygoni
<i>Weinmannia racemosa</i>	Erysiphe carpophila
<i>Weinmannia racemosa</i>	Erysiphe polygoni
<i>Weinmannia silvicola</i>	Erysiphe carpophila
<i>Weinmannia silvicola</i>	Erysiphe polygoni
<i>Wisteria</i>	Erysiphe polygoni
<i>Wisteria sinensis</i>	Oidium
<i>Zinnia elegans</i>	Erysiphe cichoracearum

It can be seen from this current situation that it is quite difficult to determine the correct name for a mildew associated with a plant.

In Table 2 I list what I consider to be the appropriate current interpretation of names for New Zealand hosts (updating the current name for the host where necessary). The question mark signifies there are multiple possibilities, or that the taxonomy of the associated PM is uncertain.

**Table 2: Probable names for New Zealand powdery mildews, and their hosts**

Current interpretation			
Plant Current Name	Family	Most probable PM	notes
Acaena	Rosaceae	Erysiphe acaenae	
Acanthus mollis	Acanthaceae	Neoerysiphe galeopsidis	Boesewinkel finding disputed
Acer negundo	Sapindaceae	Sawadaea bicornis	
Acer pseudoplatanus	Sapindaceae	Sawadaea bicornis	
Achillea millefolium	Compositae	Golovinomyces macrocarpus	
Ailanthus altissima	Simaroubaceae	Erysiphe delavayi	
Ajuga reptans	Labiatae	Neoerysiphe galeopsidis	
Alectryon excelsus	Sapindaceae	Sawadaea bicornis	endemic host
Alectryon excelsus subsp. grandis	Sapindaceae	Sawadaea bicornis	endemic host
Alseuosmia quercifolia	Alseuosmiaceae	?	endemic host
Anethum graveolens	Umbelliferae	Erysiphe heraclei	
Aquilegia vulgaris	Ranunculaceae	Erysiphe aquilegiae var. aquilegiae	
Araujia sericifera	Apocynaceae	?	
Arctium lappa	Compositae	Golovinomyces depressus	
Aristotelia	Elaeocarpaceae	Erysiphe densa	endemic host
Aristotelia fruticosa	Elaeocarpaceae	Erysiphe densa	endemic host
Aristotelia serrata	Elaeocarpaceae	Erysiphe densa	endemic host
Aster	Compositae	Golovinomyces asterum	
Aster ericoides	Compositae	Golovinomyces asterum	
Begonia	Begoniaceae	Erysiphe begoniicola?	
Begonia xsemperflorens	Begoniaceae	Erysiphe begoniicola?	
Begonia xtuberhybrida	Begoniaceae	Erysiphe begoniicola?	
Begonia coccinea	Begoniaceae	Erysiphe begoniicola?	
Begonia masoniana	Begoniaceae	Erysiphe begoniicola?	
Begonia rex	Begoniaceae	Erysiphe begoniicola?	
Beta vulgaris	Amaranthaceae	Erysiphe betae	
Borago officinalis	Boraginaceae	Golovinomyces cynoglossi	
Brachyglottis repanda var. fragrans	Compositae	?	endemic host
Brassica	Cruciferae	Erysiphe cruciferarum	
Brassica juncea var. crispifolia	Cruciferae	Erysiphe cruciferarum	
Brassica napobrassica	Cruciferae	Erysiphe cruciferarum	
Brassica oleracea var. capitata	Cruciferae	Erysiphe cruciferarum	
Brassica oleracea var. ramosa	Cruciferae	Erysiphe cruciferarum	
Brassica rapa	Cruciferae	Erysiphe cruciferarum	
Bromus hordeaceus	Gramineae	Blumeria graminis	
Buphthalmum speciosum	compositae	?	
Calendula officinalis	Compositae	Podosphaera xanthii	
Capsicum annuum	Solanaceae	Leveillula taurica	
Cardamine	Cruciferae	Erysiphe cruciferarum	
Cardamine debilis	Cruciferae	Erysiphe cruciferarum	endemic host
Cardamine flexuosa	Cruciferae	Erysiphe cruciferarum	
Cardamine hirsuta	Cruciferae	Erysiphe cruciferarum	
Carica xheilbornii	Caricaceae	Podosphaera xanthii	
Carica papaya	Caricaceae	?	
Carica pubescens	Caricaceae	?	
Carica pubescens x stipulata	Caricaceae	?	
Castanea	Fagaceae	Erysiphe castaneae	
Castanea crenata	Fagaceae	Erysiphe castaneae	
Castanea sativa	Fagaceae	Erysiphe castaneae	
Ceropegia haygarthii	Apocynaceae	?	
Chrysanthemum indicum	Compositae	Golovinomyces oronti	

Current interpretation			
Plant Current Name	Family	Most probable PM	notes
<i>Chrysanthemum morifolium</i>	Compositae	<i>Golovinomyces oronti</i>

<i>Wisteria sinensis</i>	Leguminosae	<i>Erysiphe trifoliorum</i> or <i>Phyllactinia fraxini</i>	
<i>Xerochrysum bracteatum</i>	Compositae	<i>Euodium helichrysi</i>	
<i>Zinnia elegans</i>	Compositae	?	

I emphasize that I have carried out a rapid paper-based exercise. The list will certainly contain errors and should be considered preliminary. Table 3 is the proposed preliminary checklist.

**Table 3: Possible checklist of New Zealand powdery mildews, their hosts, and dates of first record.** Entries with a question mark require verification. Entries with an asterisk are known to have the teleomorph present in NZ. Entries with a dagger are taxa not historically recognised as present in New Zealand until this exercise.

New Zealand Checklist of PMs (probably)		
PM	Hosts	First Date
<i>Arthrocladiella mougeotii</i>	<i>Lycium chinense</i>	1974
<i>Blumeria graminis</i> *	<i>Bromus hordeaceus</i> , <i>Dactylis glomerata</i> , <i>Hordeum vulgare</i> , <i>Lolium multiflorum</i> × <i>Festuca arundinacea</i> , <i>Lolium perenne</i> , <i>Phalaris aquatic</i> , <i>Phalaris minor</i> , <i>Poa trivialis</i> , <i>Schedonorus arundinaceus</i> , <i>Triticum</i> sp., <i>Triticum aestivum</i>	1922
<i>Erysiphe acaenae</i> †	<i>Acaena</i> sp	2000
<i>Erysiphe alphitoides</i>	<i>Quercus</i> sp., <i>Quercus canariensis</i> , <i>Quercus robur</i>	1922
<i>Erysiphe aquilegiae</i> var. <i>aquilegiae</i>	<i>Aquilegia vulgaris</i> , <i>Clematis</i> sp., <i>Clematis ×jackmanii</i> , <i>Clematis australis</i> var. <i>rutaefolia</i> , <i>Clematis forsteri</i> , <i>Clematis paniculata</i> , <i>Clematis recta</i> , <i>Clematis stans</i> , <i>Clematis vitalba</i> , <i>Delphinium</i> sp., <i>Delphinium ×cultorum</i> , <i>Delphinium ajacis</i>	1930

New Zealand Checklist of PMs (probably)		
PM	Hosts	First Date
Erysiphe aquilegiae var. ranunculi *	<i>Nigella damascene</i> , <i>Ranunculus acris</i> , <i>Ranunculus asiaticus</i> , <i>Ranunculus bulbosus</i> , <i>Ranunculus parviflorus</i> , <i>Ranunculus repens</i> , <i>Ranunculus sardous</i>	1953
Erysiphe australiana	<i>Lagerstroemia indica</i>	2008
Erysiphe azalea	<i>Rhododendron</i> sp. <i>Rhododendron ×fragrantissimum</i> , <i>Rhododendron aurigeranum</i> × <i>macgregoriae</i> , <i>Rhododendron</i> cv <i>vireya</i> , <i>Rhododendron indicum</i> , <i>Rhododendron occidentale</i>	1985
Erysiphe begoniicola?	<i>Begonia</i> sp, <i>Begonia ×semperflorens</i> , <i>Begonia xtuberhybrida</i> , <i>Begonia coccinea</i> , <i>Begonia masoniana</i> , <i>Begonia masoniana</i> , <i>Begonia rex</i>	1960
Erysiphe betae	<i>Beta vulgaris</i>	1996
Erysiphe carpophila	<i>Weinmannia</i> sp, <i>Weinmannia racemosa</i> , <i>Weinmannia silvicola</i>	1923
Erysiphe castaneae †	<i>Castanea</i> sp, <i>Castanea crenata</i> , <i>Castanea sativa</i>	1964
Erysiphe cotini? †	<i>Cotinus coggygria</i>	1981
Erysiphe cruciferarum *	<i>Brassica</i> sp, <i>Brassica juncea</i> var. <i>crispifolia</i> , <i>Brassica napobrassica</i> , <i>Brassica oleracea</i> var. <i>capitata</i> , <i>Brassica oleracea</i> var. <i>ramosa</i> , <i>Brassica rapa</i> , <i>Cardamine</i> sp., <i>Cardamine debilis</i> , <i>Cardamine flexuosa</i> , <i>Cardamine hirsuta</i> , <i>Cleome</i> sp., <i>Cleome hassleriana</i> , <i>Fumaria bastardii</i> , <i>Fumaria officinalis</i> , <i>Iberis umbellate</i> , <i>Raphanus raphanistrum</i> subsp. <i>maritimus</i> , <i>Sisymbrium irio</i> , <i>Sisymbrium officinale</i>	1919

Erysiphe densa	<i>Aristotelia</i> sp., <i>Aristotelia fruticosa</i> , <i>Aristotelia serrata</i>	1855
Erysiphe euonymi	<i>Euonymus europaeus</i>	1958
Erysiphe heraclei	<i>Anethum graveolens</i> , <i>Pastinaca sativa</i> , <i>Wasabia japonica</i>	1969
Erysiphe howeana	<i>Oenothera biennis</i> , <i>Oenothera glazioviana</i>	2000
Erysiphe hyperici	<i>Hypericum gramineum</i>	1937
Erysiphe lonicerae	<i>Lonicera japonica</i>	?
Erysiphe magnifica? †	<i>Magnolia liliiflora</i>	1978
Erysiphe necator	<i>Vitis vinifera</i>	1922
Erysiphe pisi	<i>Medicago lupulina</i> , <i>Melilotus indicus</i> , <i>Pisum sativum</i> , <i>Lathyrus clymenum</i> ?, <i>Lathyrus inconspicuous</i> ?, <i>Lathyrus latifolius</i> ?, <i>Lathyrus linifolius</i> ?, <i>Lathyrus odoratus</i> ?, <i>Lathyrus tuberosus</i> ?, <i>Lupinus polyphyllus</i>	1948
Erysiphe platani	<i>Platanus</i> sp, <i>Platanus ×acerifolia</i> , <i>Platanus orientalis</i>	1984
Erysiphe rubicola	<i>Rubus australis</i> , <i>Rubus cissoides</i>	1925
Erysiphe russellii	<i>Oxalis corniculata</i> , <i>Oxalis exilis</i>	1972
Erysiphe trifolii	<i>Trifolium dubium</i> , <i>Trifolium micranthum</i> , <i>Trifolium striatum</i> , <i>Trifolium subterraneum</i>	1967
Erysiphe trifoliorum	<i>Cytisus scoparius</i> , <i>Wisteria</i> sp?, <i>Wisteria sinensis</i> ?	2011
Erysiphe viburni	<i>Viburnum japonicum</i> , <i>Viburnum opulus</i> , <i>Viburnum trilobum</i>	1975
Euodium helichrysi †	<i>Xerochrysum bracteatum</i>	1975
Euodium lycopersici †	<i>Cyphomandra fragrans</i> , <i>Solanum</i> sp, <i>Solanum betaceum</i>	1919
Golovinomyces ambrosiae †	<i>Helianthus</i> sp, <i>Helianthus annuus</i>	1968
Golovinomyces asterum * †	<i>Aster</i> sp, <i>Aster ericoides</i> , <i>Symphytum subulatum</i>	1937
Golovinomyces asterum var. solidagini †	<i>Solidago altissima</i> , <i>Solidago canadensis</i>	1940
Golovinomyces biocellatus	<i>Mentha</i> sp, <i>Monarda didyma</i> , <i>Mondara</i> sp, <i>Salvia hydrangea</i> ?, <i>Salvia judaica</i> ?, <i>Stachys byzantine</i> ?	1982
Golovinomyces brunneopunctatus †	<i>Erythranthe guttata</i>	2008
Golovinomyces cichoracearum	<i>Helminthotheca echioides</i> , <i>Taraxacum officinale</i> ?, <i>Tragopogon porrifolius</i> ?	1953
Golovinomyces cucurbitacearum *†	<i>Citrullus lanatus</i> , <i>Cucumis melo</i> var. <i>cantalupensis</i> , <i>Cucumis metuliferus</i> , <i>Cucumis sativus</i> , <i>Cucurbita maxima</i> , <i>Cucurbita moschata</i> , <i>Cucurbita pepo</i> , <i>Cucurbita pepo</i> var. <i>meleopepo</i> , <i>Sechium edule</i>	1937
Golovinomyces cynogloss	<i>Myosotis arvensis</i> , <i>Myosotis sylvatica</i> , <i>Borago officinalis</i> , <i>Echium vulgare</i>	1975
Golovinomyces depressus	<i>Arctium lappa</i>	1974
Golovinomyces macrocarpus †	<i>Achillea millefolium</i> , <i>Cota tinctoria</i> , <i>Tanacetum vulgare</i>	2003
Golovinomyces magnicellulatus	<i>Cirsium arvense</i> , <i>Phlox paniculata</i>	2001
Golovinomyces montagnei †?	<i>Cynara scolymus</i>	1981
Golovinomyces oronti	<i>Chrysanthemum indicum</i> , <i>Chrysanthemum morifolium</i> , <i>Dahlia</i> sp, <i>Kalanchoe</i> sp, <i>Matricaria discoidea</i> ?, <i>Nicotiana alata</i> , <i>Nicotiana tabacum</i> , <i>Papaver dubium</i> , <i>Papaver nudicaule</i> , <i>Papaver somniferum</i> , <i>Penstemon hartwegii</i> , <i>Penstemon strictus</i> , <i>Petunia</i> ?, <i>Petunia ×hybrida</i> ?, <i>Rosmarinus officinalis</i> ?,	1925

New Zealand Checklist of PMs (probably)		
PM	Hosts	First Date
	Saintpaulia ionantha?, Sinnningia sp, Streptocarpus sp, Thunbergia gibsonii, Thunbergia gregorii, Thymus sp?, Thymus serpyllum, Valerianella locusta, Veronica sp, Veronica speciosa, Viola sp, Viola ×wittrockiana, Viola tricolor, Viola tricolor var. hortensis	
Golovinomyces sonchicola †	Sonchus oleraceus	1919
Golovinomyces sordidus	Plantago sp, Plantago lanceolata, Plantago major, Plantago raoulii, Plantago triandra subsp. triandra	1951
Golovinomyces verbasci	Verbascum sp, Verbascum thapsus, Verbascum virgatum,	1938
Leveillula lappae †?	Cynara cardunculus, Cynara scolymus, Gazania sp., Gazania rigens	2000
Leveillula taurica	Capsicum annuum	2004
Neoerysiphe galeopsidis	Acanthus mollis, Ajuga reptans, Lamium amplexicaule, Rosmarinus officinalis?, Salvia hydrangea ?, Salvia judaica ?, Salvia officinalis ?, Stachys byzantina ?, Thymus sp?, Thymus serpyllum?	1984
Neoerysiphe geranii	Geranium homeanum, Geranium solanderi	1965
Neoerysiphe nevoi †	Scolymus	2004
Oidiopsis parietaria? †	Parietaria judaica	1991
Phyllactinia fraxini †?	Wisteria sp, Wisteria sinensis	2008
Podosphaera aphanis?	Potentilla sp, Eucalyptus sp?, Eucalyptus albens?, Eucalyptus diversifolia?, Eucalyptus eremophila?, Eucalyptus grossa?, Eucalyptus megacarpa?, Eucalyptus moluccana?, Eucalyptus nutans?, Eucalyptus nutans?, Eucalyptus torquata?	1950
Podosphaera epilobii †	Epilobium ciliatum, Epilobium melanocaulon, Epilobium pubens	1953
Podosphaera erigerontis-canadensis †	Matricaria discoidea?, Taraxacum officinale?, Tragopogon porrifolius?	1975
Podosphaera erodii? †	Erodium moschatum	1954
Podosphaera euphorbiae	Euphorbia sp, Euphorbia peplus,	2005
Podosphaera euphorbiae-hirtae†	Euphorbia titymaloides	?
Podosphaera fuliginea	Veronica sp, Veronica arvensis?, Veronica persica?	1972
Podosphaera leucotricha *	Cydonia oblongata, Malus ×domestica, Malus sylvestris, Photinia glabra, Photinia serrulata	1919
Podosphaera mors-uvae	Ribes grossularia, Ribes uva-crispa	1988
Podosphaera pannosa *	Rosa sp, Rosa ×rehdexana?, Rosa chinensis × multiflora, Rosa multiflora, Rosa rubiginosa	1919
Podosphaera tridactyla?	Prunus armeniaca, Prunus laurocerasus, Prunus persica	1960
Podosphaera xanthii *	Calendula officinalis, Carica ×heilbornii, Cosmos atrosanguineus, Cosmos bipinnatus, Hoheria glabrata, Hoheria lyallii, Hoheria lyallii, Hoheria populnea, Impatiens sp, Impatiens balsamina, Lactuca serriola, Lagenaria siceraria, Plagianthus regius, Sanvitalia procumbens, Saintpaulia ionantha ?, Vigna Caracalla, Vigna mungo	1937
Pseudoidium euonymi-japonici	Euonymus japonicus, Euonymus japonicus 'aureomarginatus'	1953
Pseudoidium hardenbergiae	Hardenbergia violacea	1974
Pseudoidium hortensiae	Hydrangea sp, Hydrangea macrophylla	1937
Pseudoidium neolycopersici †	Solanum lycopersicum	1983
Sawadaea bicornis	Acer negundo, Acer pseudoplatanus, Alectryon excelsus, Alectryon excelsus subsp. grandis, Dodonaea viscosa	1958

In addition, the following plants have records of PMs which require further investigation to ascertain their identity.

*Alseuosmia quercifolia*, *Araujia sericifera*, *Brachyglossis repanda* var. *fragrans*, *Buphthalmum speciosum*, *Carica papaya*, *Carica pubescens*, *Carica pubescens* × *stipulata*, *Ceropegia haygarthii*, *Cianthus puniceus*, *Coriaria angustissima*, *Coriaria arborea*, *Coriaria lurida*, *Crataegus monogyna*, *Erica* spp, *Gerbera* sp, *Gerbera jamesonii*, *Hibiscus syriacus*, *Huernia macrocarpo*, *Hylotelephium spectabile*, *Jacobaea vulgaris*, *Limosella lineata*, *Linaria* spp, *Mida salicifolia*, *Modiola caroliniana*, *Myriophyllum* sp, *Myriophyllum aquaticum*, *Nemesia* sp, *Nemesia strumosa*, *Olearia furfuracea*, *Olearia nummularifolia*, *Olearia rani*, *Phaseolus coccineus*, *Phaseolus vulgaris*, *Phebalium*, *Phlox paniculata*, *Pyrus communis*, *Pyrus pyrifolia*, *Robinia pseudoacacia*, *Sedum praealtum*, *Senecio cruentus*, *Senecio glomeratus*, *Senecio rufiglandulosus*, *Senecio vulgaris*, *Solanum* sp, *Solanum*

*aviculare*, *Solanum integrifolium*, *Solanum laciniatum*, *Solanum mauritianum*, *Solanum melongena* var. *esculenta*, *Solanum physalifolium*, *Solanum tuberosum*, *Sophora micophylla*, *Sophora microphylla*, *Sophora prostrata*, *Spiraea* sp., *Spiraea japonica*, *Streblus banksii*, *Streblus smithii*, *Urtica australis*, *Urtica dioica*, *Urtica ferox*, *Urtica incisa*, *Vasconcellea microcarpa*, *Vasconcellea pubescens*, *Verbena* sp., *Verbena xhybrida*, *Verbena bonariensis*, *Vigna caracalla*, *Vitex lucens*, *Zinnia elegans*

Currently we may have 72 taxa of PMs (5 of which require confirmation), together with a number of unknown and unidentified species. Only 8 of these taxa are known to have the teleomorphic stage in New Zealand and the rest are represented by anamorphs only. These 72 taxa are associated with 170 genera of host plants. Many PMs have a narrow host range but *Golovinomyces orontii* and *Podosphaera xanthii* are known to have a broad host range.

The preliminary revision adds 24 names for PMs which are probably present in New Zealand but historically unrecognised. The list removes 7 names associated with probable historical misapplications (*Erysiphe euonymi-japonici*, *Erysiphe penicillata*, *Erysiphe polygoni*, *Euoidium chrysanthemi*, *Phyllactinia guttata*, *Podosphaera clandestina*, *Podosphaera fugax*)

The majority of NZ PMs are introduced along with their hosts. Our only endemic PMs are *Erysiphe densa* on *Aristotelia*, *Erysiphe carpophila* on *Weinmannia* and *Erysiphe rubicola* on endemic *Rubus* species. However, Braun & Cook note that *E. rubicola* is poorly known and is similar to *E. carpophila* (which would be an unusual host range if they are the same). In addition, I believe the identity of the *Alectryon* and *Dodaneae* PMs as *Sawadaea bicornis* merits further investigation. It wouldn't surprise me to find these PMs are undescribed. Furthermore we have a number of endemic host species with unidentified PMs, viz. *Alseuosmia quercifolia*, *Brachyglottis* spp., *Clianthus puniceus*, *Coriaria* spp., *Mida salicifolia*, *Olearia* spp., *Senecio rufiglandulosus*, *Sophora* spp., *Streblus* spp., *Urtica ferox* and *Vitex lucens*. Many of these will turn out to be known PMs with global distributions, but some may turn out to be endemic and undescribed PM species. For example the PM of *Coriaria* can be accompanied by chasmothecia indicating it has been here a long period, and therefore potentially an endemic species. In particular the PMs associated with the threat listed plants *Clianthus puniceus* and *Streblus banksii* require identification.

New Zealand PMs follow the general rule that there is a significant time lag between the first introduction of a PM as the anamorph, and the subsequent discovery of the teleomorph. Boesewinkel (1976) noted the first occurrence of the teleomorph of a number of PMs and from the date of first records we can calculate the minimum potential lag period, summarised in Table 4.

**Table 4: New Zealand powdery mildews exhibiting the teleomorph stage**

PM	First record of PM (acc. PDD records)	First record of teleomorph	Lag (years)
<i>E. rubicola</i> (endemic)	1925	1927	2
<i>P. leucotricha</i>	1919	1923	3
<i>E. carpophila</i> (endemic)	1923	1923	0
<i>E. densa</i> (endemic)	1855	1855	0
<i>G. cichoracearum</i>	1953	1956	3
<i>G. asterum</i>	1937	1974	37
<i>E. aquilegiae</i> var. <i>ranunculi</i>	1953	1974	21

<i>P. xanthii</i>	1937	2005	68
-------------------	------	------	----

We can see a distinct bimodal distribution with very short time lag for endemic species and a long time lag for introduced species. Obviously, the short time lag for endemic species simply indicates that the PMs are indeed indigenous and the teleomorph historically present, even if not recorded. The remainder indicate a time lag of 20-70 years. It is likely that more teleomorph states have been recorded but the PDD material would need to be examined to identify them. The short time lags for the occurrence of the teleomorphs of the introduced *Podosphaera leucotricha* and *Golovinomyces cichoracearum* probably indicate a significant delay between the introduction of the fungus and its first record.

In summary, this analysis presents a tentative re-interpretation of the available evidence to provide a list of PM taxa known to be present in New Zealand with their known hosts. The analysis highlights that our knowledge remains inadequate, with many poorly known and potentially undescribed taxa. Available data lend support to the observation of a time lag between introduction of a new PM, its persistence as the anamorph, and the discovery of a teleomorph. Why this should happen is an interesting and open question.
