

FUNNZ FORAY REPORT FOR 2013

Jerry Cooper, 7th August 2013

STATISTICS

799 records added to the FUNNZ database (424 on the 2012 Foray)

The FUNNZ database now contains 9198 records

The 799 records represent 321 taxa identified to species (241 taxa on the 2011 Foray)

312 specimens were added to the PDD national collection (119 on the 2011 foray).

SITES WITH MOST COLLECTIONS

The Te Wera and Moanui localities were most productive, with Eastwoodhill Arboretum in third place.

NEW RECORDS FOR NEW ZEALAND

Seven new records are flagged as potentially new to New Zealand, and this is probably a record for a foray. Eastwoodhill Arboretum provided most of them, which is unsurprising due to the number of exotic tree species in the collection which are not present elsewhere in New Zealand. *Amanita rubescens* was confirmed as present in New Zealand. Other new records were *Lactarius quiteus* var. *incanus* under a Mexican Oak species, *Tricholoma pardinum* with Oak, *Cortinarius purpurascens* with Oak, *Russula cyanoxantha* with Oak, *Rhizopogon niger* with *Chamaecyparis japonica*, and *Clitocybe rivulosa*. However all of these new records must remain tentative without sequence-based confirmation. They are all species within taxonomically difficult and complex groups. There is also a new record of *Suillus americanus* from Wairata Forest Farm with *Pinus radiata*, which must remain doubtful until confirmed.

ASSESSMENT USING DOC CRITERIA FOR CONSERVATION STATUS

The conservation status of New Zealand fungi is currently under active review and historical lists are now too dated to be useful, so I will not include the usual analysis. However, some records are worthy of note. *Gloeocantharellus novae-zelandiae* is a recognisable fungus which is most definitely rarely collected and must be considered Nationally Critical under any assessment. *Hygrophoropsis umbriceps* is likewise recognisable and encountered infrequently and probably best considered Nationally Vulnerable. Records of these species were both collections made by Wanda Daley and recognised at the time as 'special'. *Clavaria ardosiacae* is known only from the holotype collection and *Clavaria rubicundula* from only one other collection in PDD. However, in New Zealand at least, the group is taxonomically difficult, far from resolved, and these records require confirmation.

NOTES ON SELECTED SPECIES.

My notes on species will now appear on the FUNNZ Mycoblog. The foray was particularly fruitful for *Leucoagaricus/Lepiota* and *Mycena* species, mostly without formal names, in addition to the many exotic species at Eastwoodhill Arboretum.
